

CLAIMS

1. An object-holder, characterized in that it comprises
5 a support (2),
fixing means (4) enabling said support to be carried by
a user,
at least one arm (10) mounted on said support so as to
be mobile from a storage position and toward said
10 storage position and having receiving means (13) for at
least part of at least one object (22), enabling said
object to be carried and to be stored when said arm is
in its storage position,
and means (14, 15) for locking and holding said arm
15 and/or said object (18) carried by said arm when said
arm is in said storage position.
2. The object-holder as claimed in claim 1,
characterized in that said arm (10) is mounted
20 pivotably on said support (2).
3. The object-holder as claimed in claim 1,
characterized in that said arm is mounted slideably on
said support.
25
4. The object-holder as claimed in any one of the
preceding claims, characterized in that said support
and said arm comprise complementary parts (14, 15)
respectively, that couple together elastically when
30 said arm is brought to said storage position.
5. The object-holder as claimed in any one of the
preceding claims, characterized in that said locking
and holding means comprise means (14, 15) for elastic
35 coupling of said arm to said support.
6. The object-holder as claimed in any one of the
preceding claims, characterized in that said locking

and holding means comprise means (18) for elastic coupling of the object to said support.

5 7. The object-holder as claimed in any one of the preceding claims, characterized in that said locking and holding means comprise at least one fork (15, 18), at least one branch of which is elastic in order to receive and to hold, elastically, between its branches, at least one part of said arm and/or of said object.

10

8. The object-holder as claimed in any one of the preceding claims, characterized in that said receiving means comprise at least one orifice or one passage (13a) for receiving at least one part of at least one object.

15

9. The object-holder as claimed in any one of the preceding claims, characterized in that said receiving means comprise at least one platform (13) for receiving at least one object.

20

10. The object-holder as claimed in any one of the preceding claims, characterized in that said receiving means comprise means for elastic locking of at least one object.

25

11. The object-holder as claimed in any one of the preceding claims, characterized in that said support (2) can be arranged on the user in such a position that said arm is articulated on said support on a vertical rod placed on the user's side, this arm extending rearward when it is in its abovementioned storage position and moving away from this storage position toward the side.

30

12. The object-holder as claimed in any one of the preceding claims, characterized in that said fixing means comprise means for fixing on a backpack.

35
